

Anthony Thap - Brian Ackley

Operating Systems CSE460

Winter 2014

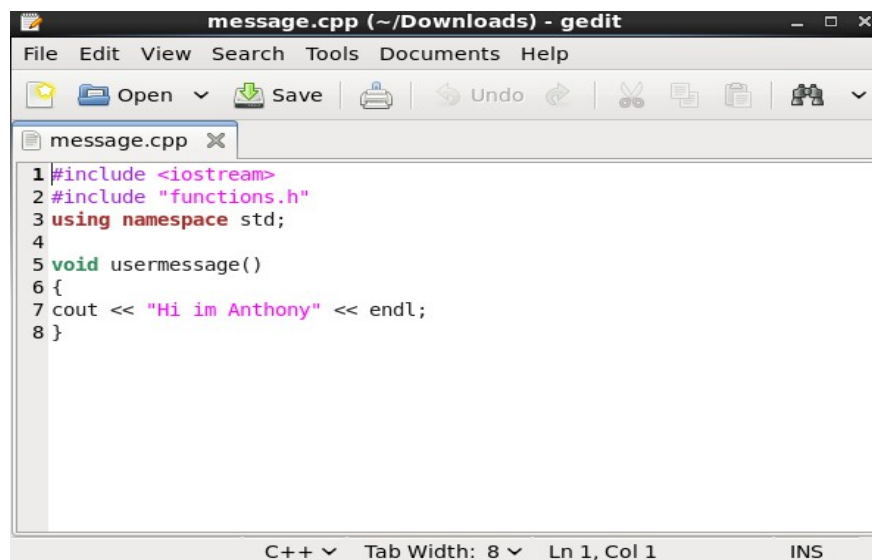

## Lab #1

For this lab we had to install Cent-OS and write a basic program that used a makefile to compile. We had no difficulty in installing Cent-OS in VMWare and writing the program that outputted a basic string which was “Hi im Anthony”. These are the screenshots that show that we completed the assignment.

```
main.cpp (~/Downloads) - gedit
File Edit View Search Tools Documents Help
Open Save Undo
main.cpp x
1 #include <iostream>
2 #include "functions.h"
3 using namespace std;
4
5 int main()
6 {
7     usermessage();
8 }
C++ Tab Width: 8 Ln 8, Col 2 INS
```

- This is our main.cpp file

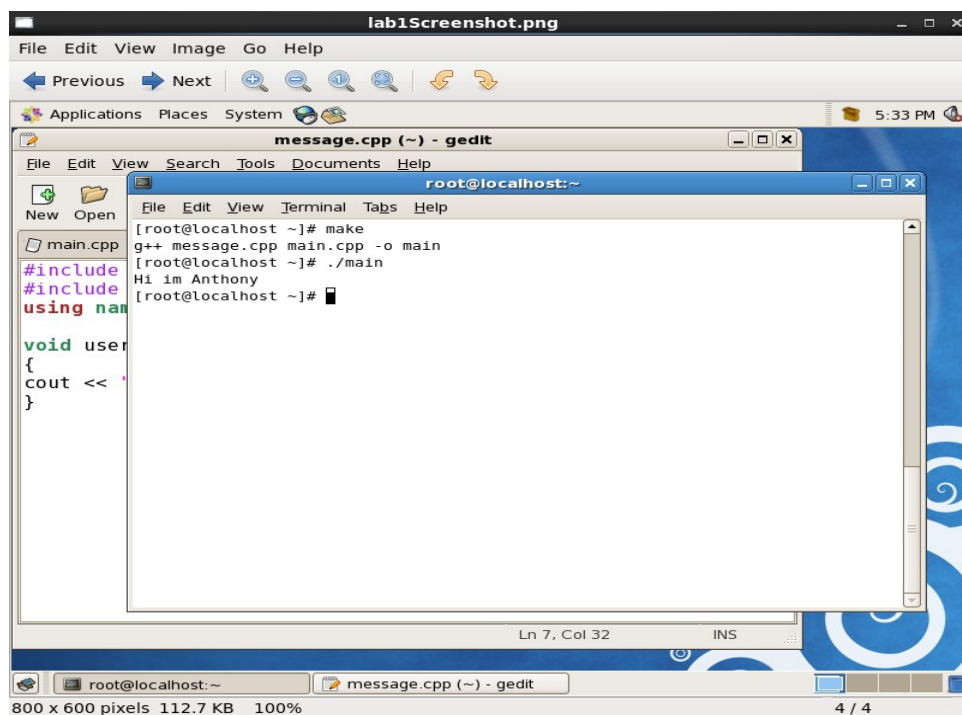

```
message.cpp (~/Downloads) - gedit
File Edit View Search Tools Documents Help
Open Save Undo
message.cpp x
1 #include <iostream>
2 #include "functions.h"
3 using namespace std;
4
5 void usermessage()
6 {
7     cout << "Hi im Anthony" << endl;
8 }
C++ Tab Width: 8 Ln 1, Col 1 INS
```

- This is our message.cpp file

```
1 all:
2 g++ message.cpp main.cpp -o main
```

```
1 void usermessage();
```

- This is our output for the lab. We successfully completed the assignment and will give ourselves full credit.
